BLACK OXIDE BLUING

Service Overview

Wyoming Gun Company is proud to announce our newest gunsmithing service: Black Oxide Bluing! Working closely with world-renowned experts "Du-Lite", we now have a system that can professionally finish most steels. From complete barreled actions to small parts, we can restore the factory finish that your firearm originally came with, or put an attractive corrosion resistant coating on most any steel component, not limited to just firearms.

About Black Oxide Finishing

The black oxide process actually penetrates the metal surface to provide durable protection without altering the physical dimensions or properties of the metal itself, leaving a lustrous deep black appearance. The quality of the end result depends on the preparation. Black Oxide Bluing will not cover up imperfections in the exterior of the steel.

Preparation

Steel parts must be stripped of the existing finish. All rust, scratches, pitting, and impurities must be removed. The steel parts must be totally clean and oil-free prior to the Black Oxide process. Professional gunsmith, Geoff Montgomery can polish the steel to whatever grit you desire - up to a matchless (mirror) finish. Prices are charged by the hour for prep and polish. You are also welcome to prep the metal parts yourself and bring them in for the Black Oxide coating.

PRICING

(Depends on size of project)

Matte Finish *(Abrasive / bead blast / wire wheel).*

Price Range: \$75 - \$150

Deluxe Finish: Same as above followed with #320 and #400 grit polish with all screw holes and corners protected and square.

Price Range: \$150 - \$350

Master Finish: Same as Deluxe Finish with all polishing marks removed and finished with a matchless polish to a mirror finish.

Price Range: \$300 - \$500
